

G6 final training set — episodes per object category (153 categories from 280 objects, 10,139 episodes)
All cuboid variants (84 box sizes, 5 bs_cube meshes, prim_cuboid) are pooled into one 'cuboid' category; Objaverse variant suffixes (pea2...pea12) are merged into their base name. Log scale — counts span 3 to 1,590.
Bar colour = the component contributing most episodes; only 2 of the 153 categories span more than one (cuboid = A 750 + B 840, squid = D 10 + E 20).
